BAJII BORAH

Software Developer

PROFESSIONAL EXPERIENCE

Software Developer — Zigama CSS, Kigali

Mar 2026 – Present

Project: HRMS — Zigama CS

- Tested system control weaknesses
- Analyzed payroll processing workflow
- Tested payroll integrity controls
- Implementation of HRMS user data structure
- Performed access control and role analysis

Project: Fraud Detection System — Zigama CSS

- Deployed a 6-service microservices pipeline in Docker
- Built a live dashboard covering real-time transaction scoring
- Implemented TOTP-based 2FA and 3-tier role-based access control

EDUCATION

Bachelor's Degree in Information Technology

Nov 2026 (Expected)

Major in Software Engineering — Adventist University of Central Africa (AUCA), Kigali

Related coursework: .NET, Web Technology, Java Programming, Object Oriented Programming, PL/SQL, DBMS, Best Programming Practices, Software Testing, Data Structures and Algorithms, Mobile Programming, C Programming, Software Modelling and Design.

Advanced Level (A2), Science Courses

Jan 2019 – Aug 2022

Groupe Scolaire de Gahini, Kigali, Kayonza

PROJECTS

AgriOptima — AI-Powered Crop Recommendation System

github.com/BAJII1/AgriOptima-FinalYearProject

A completed AI-powered decision-support system that helps farmers make informed crop planning decisions based on market demand, profitability analysis, and production trends.

- AI-powered conversational assistant (AgriChat)
- Intelligent crop recommendation and market demand/profitability analysis
- Overproduction risk detection, scenario comparison, and decision support
- Farmer-friendly interactive interface

Technologies: Java, Spring Boot, FastAPI, PostgreSQL, Artificial Intelligence (AI), Machine Learning concepts, Git

Role-Driven Library Book & Membership Management System

github.com/BAJII1/RoleDrivenLibraryBookMembershipManagement_26596

- Developed a full-stack library management system with role-based access control for librarians, members, and administrators
- Built React + Vite frontend with a responsive UI and seamless API integration
- Designed a Spring Boot REST API backend with secure endpoints, business logic, and CRUD operations for book management and authentication

Technologies: React, Vite, Spring Boot, REST API, Java, JavaScript

Rwandair E-Booking System

github.com/BAJII1/WEB-DESIGNPROJECT_FinalExam/tree/main/rwandair_booking_system

- Built an airline booking management system for users and administrative staff to manage flights and bookings
- Integrated OTP verification for secure access control

Technologies: HTML5, CSS3, JavaScript, PHP, MySQL
